

Title: Reading Intervention Strategies for Improving Comprehension Skills Among Struggling Elementary Learners

Background of the Study

Reading comprehension is an important skill that affects student learning across different subjects. Learners who struggle with reading may also experience difficulty understanding instructions, answering questions, solving word problems, and completing academic tasks. In elementary education, early reading difficulties can affect long-term academic performance if not addressed properly.

Reading intervention strategies are designed to provide additional support to learners who have difficulty understanding texts. These strategies may include guided reading, vocabulary building, repeated reading, story mapping, phonics support, and comprehension questioning. These interventions can help learners improve fluency, vocabulary, and understanding of written materials.

This study aims to examine the use of reading intervention strategies in improving comprehension skills among struggling elementary learners. It will focus on the types of interventions used, learner progress, and challenges faced by teachers during implementation.

Statement of the Problem

The main problem addressed by this study is the low reading comprehension level of some elementary learners. Without proper intervention, these learners may continue to struggle in different academic areas.

Research Objectives

This study aims to:

1. Identify the reading difficulties commonly experienced by elementary learners.
2. Determine the reading intervention strategies used by teachers.
3. Assess the improvement in learners' reading comprehension after intervention.
4. Identify challenges faced by teachers in implementing reading interventions.
5. Recommend effective strategies for supporting struggling readers.

Proposed Methodology

This study will use a descriptive research design. Data may be gathered through teacher surveys, learner reading assessment results, and observation notes. The study may focus on selected elementary learners who are identified as needing reading support.

The data will be analyzed using frequency, percentage, mean, and comparison of pre-assessment and post-assessment results. Teacher responses may also be summarized to identify common challenges and effective practices.

Expected Output

The expected output of this study is a report showing how reading intervention strategies help improve comprehension skills among struggling learners. The study may also identify which strategies are most useful in supporting reading development.

Significance of the Study

This study may benefit learners by helping improve their reading comprehension and academic confidence. It may also help teachers choose appropriate intervention strategies for struggling readers. School administrators may use the findings to strengthen literacy programs and reading support services.
