Demo Narration Script — Migui's parts

Read each line while its screen shows. The time is where the line starts in the video (minutes:seconds). The video holds still on each screen long enough for its line at a calm pace; if you need longer, pause or slow that clip in your editor. Each video also has a matching .srt file with the same lines, usable as a teleprompter track.

2d Monitoring Sheet (2:29)

Video: 2d-Monitoring-Sheet.mp4

Time	On screen	Say
0:01	Signed in as Graduate School Staff (staff@usls.edu.ph)	In this video, we'll look at the Monitoring Sheet. First, Graduate School staff signs in.
0:09	Open Monitoring Sheet, choose MSN	Here we have the Monitoring Sheet, under Records. Each row is a student, and each column is a subject. The colours show what is completed, what is enrolled, and what is not taken yet.
0:22	Open Add student	Let's start by adding a student who is missing from the imported sheet. The window warns that this is a manual entry, and it records who made it and when.
0:36	Fill and submit the new student	The form asks for the student ID and the name. The school year the student started comes already filled in. The same checks as an import still apply, so the same student can't be added twice.
0:50	Fill and submit the new student	And just like that, the student is added, with a Student Portal login.
0:56	Add subjects now: the record panel	Next, we have the record panel. It lists all eighteen subjects. None are taken yet, and the units are counted automatically.
1:05	Add subject row MSN-FED	Now Graduate School staff adds a subject, marks it Completed, picks the term from the list, and adds a remark.
1:17	Two manual rows with provenance	Notice that both new rows say Manual entry in the Source column. That way, hand-typed data is never mixed up with imported data.
1:27	Edit the remarks of MSN-FED	If a remark needs fixing, it's a simple edit.
1:34	Remove the MSN-MOR row with a reason	What about removing a row? That needs a reason. The subject goes back to not taken, and the removal stays in the history.
1:47	Change history tab	Speaking of history, here we have the Change history tab. It shows every add, change, and removal: the old value, the new value, who did it, when, and why. That is the audit trail.
2:01	New student appears in the grid, marked Manual	Back on the grid, the new student now has a Manual tag, and each hand-entered cell shows an orange dot.
2:09	Imported student: provenance and reason required to change an imported value	Now let's compare that with an imported student. Every row here says Imported, because the values come from the official workbook.
2:18	Imported student: provenance and reason required to change an imported value	Changing an imported value needs a reason, and the staff member's name is saved with it. And grades are never typed in here. AIMS stays the official source.

2h 1 Leave of Absence (2:47)

Video: 2h-1-Leave-of-Absence.mp4

Time	On screen	Say
0:01	Signed in as Student (loa.daniel@usls.edu.ph)	Next, we have the Leave of Absence. Meet Daniel, a Master of Arts in Education student.
0:08	Student opens Leave of Absence	Under Requests, Daniel opens Leave of Absence. Right away, the form shows the limit: two semesters at a time.
0:16	Student reads the rules panel	Here we have a panel that lists every rule the screen follows, each with its page in the Handbook.

0:27	Student fills the form	Now Daniel picks the dates, chooses a reason, and adds a short explanation.
0:32	Student sends the request	Before sending, Daniel gets a summary to check.
0:37	Student sends the request	The request is sent, and now it waits for Graduate School staff.
0:42	Signed in as Graduate School Staff (staff@usls.edu.ph)	So let's switch over. Graduate School staff signs in.
0:47	Staff opens the Leave of Absence board and finds Daniel	Here we have the Leave of Absence board. Each column is a stage, and each card is a request.
0:56	Staff drags the card to In staff review	Graduate School staff drags the card to In staff review. The server checks every move before it counts.
1:09	Staff opens the request and reads the policy check	Next is the policy check. It gives advice, either Pass or Needs review. But it never makes the decision. The Dean does.
1:22	Staff forwards to the Dean	So Graduate School staff forwards the request to the Dean.
1:27	Staff forwards to the Dean	The card moves to With the Dean, and staff can no longer change it.
1:33	Signed in as Dean (dean@usls.edu.ph)	Now it's the Dean's turn. The Dean signs in.
1:45	Dean drags the card to Leave scheduled and approves	The Dean drags the card to Leave scheduled.
1:50	Dean drags the card to Leave scheduled and approves	And the leave is approved and flagged for the Registrar. The Dean could also have denied it.
1:57	Signed in as Graduate School Staff (staff@usls.edu.ph)	Back to the office side. Graduate School staff signs in again.
2:09	Staff drags the card to On leave and starts the leave	For this demo, Graduate School staff starts the leave by hand.
2:15	Staff drags the card to On leave and starts the leave	Daniel is now on leave, and enrollment is closed.
2:19	Staff sees the Registrar list	Next, we have the Registrar list. The portal doesn't send e-mail. Graduate School staff sends it the official way.
2:31	Staff marks the list as sent	Then Graduate School staff marks the list as sent to the Registrar.
2:37	Signed in as Student (loa.daniel@usls.edu.ph)	Finally, let's check on Daniel. Daniel signs in one more time.
2:43	Student sees the leave	And Daniel's page now shows the status On leave.

2h 2 Readmission (2:52)

Video: 2h-2-Readmission.mp4

Time	On screen	Say
0:01	Signed in as Student (readmission.therese@usls.edu.ph)	Now let's look at Readmission, which is coming back from a leave. Therese has been on approved leave, and signs in to come back.
0:11	Student opens Readmission	Here we have the Readmission page. Enrollment stays closed until the readmission is approved. The leave that is ending is already filled in.
0:20	Student reads the rules panel	The rule says a returning student must write an intent to enroll. That's on page fifty-three of the Handbook.
0:30	Student fills the request (no ticks)	So Therese picks the return semester and gives a reason. There's nothing to tick. The system shows what it already checked in the records, and what staff still need to confirm.
0:45	Student sends the request	The request is sent. It goes to Graduate School staff first, and then to the Dean.
0:51	Signed in as Graduate School Staff (staff@usls.edu.ph)	Let's switch to the office. Graduate School staff signs in.
0:57	Staff opens the Readmission board and finds Therese	Here we have the Readmission board. It works the same way, with its own columns. Therese's card is in Submitted.
1:09	Staff opens the request, reads the checklist and the policy check	Opening it, the request shows the return semester, the intention, and the leave it's linked to.
1:16	Staff opens the request, reads the checklist and the policy check	Next, we have the return checklist. It follows page forty-five of the Handbook. The system already checked the written intention and the subjects left. The Business Office clearance and the interview are for staff

		to confirm.
1:30	Staff opens the request, reads the checklist and the policy check	The policy check also flags an early return. Only the Dean can allow that, so it shows Needs review.
1:40	Staff ticks the two office checks and forwards to the Dean	When forwarding, Graduate School staff ticks the two office checks. Anything left unticked reaches the Dean as Needs review.
1:51	Signed in as Dean (dean@usls.edu.ph)	Now it's the Dean's turn. The Dean signs in to decide.
2:03	Dean drags the card to Approved and approves	The Dean approves the return and adds a note.
2:09	Dean drags the card to Approved and approves	And Therese is active again. Readmission restores the student's standing, but it doesn't enroll any subjects. The Academic Coordinator does that next.
2:18	Signed in as Graduate School Staff (staff@usls.edu.ph)	Back to the office side. Graduate School staff signs in again.
2:26	Staff sees the approved request and the Registrar list	On the staff board, the Academic Coordinator is now the next owner, and the case is flagged for the Registrar.
2:34	Staff sees the approved request and the Registrar list	Here we have the same Registrar list as before. Download it, send it, mark it sent, and then mark it acknowledged.
2:42	Signed in as Student (readmission.therese@usls.edu.ph)	Finally, Therese signs back in.
2:47	Student sees the result	Therese can see the approval, along with the messages from staff and the Dean.

2h 3 AWOL and Return from AWOL (2:55)

Video: 2h-3-AWOL-and-Return-from-AWOL.mp4

Time	On screen	Say
0:01	Signed in as Graduate School Staff (staff@usls.edu.ph)	Next, we have AWOL, and the return from AWOL. This one starts on the office side. Graduate School staff signs in.
0:10	Staff opens AWOL & Residency and finds Maya (flagged by the system)	Here we have the AWOL and Residency board. It flags cases straight from the imported enrollment records. Nobody marks a student AWOL by hand.
0:20	Staff opens AWOL & Residency and finds Maya (flagged by the system)	The card for Maya Torres is in the AWOL column, waiting on the student. Staff can't move it. Only the student can start a return.
0:30	Staff reads the rules panel	Residence limits also apply. A master's student has five years normally, and seven at most. A doctoral student has seven, and nine at most. Time on leave counts too.
0:43	Staff opens Maya's AWOL card	The card shows the AWOL date, where the flag came from, and the last semester the student enrolled.
0:51	Signed in as Student (awol.maya@usls.edu.ph)	Now let's see the student's side. Maya signs in.
0:56	Student opens Return from AWOL	Here we have the Return from AWOL page. It shows the flag. Registration stays restricted until the return is reviewed.
1:06	Student fills and sends the return declaration	The next open semester is already picked, and the last enrolled semester comes from the records. So Maya only writes the intention and the reason.
1:18	Student fills and sends the return declaration	The request is sent. The system checks that Maya is still within the maximum residence.
1:24	Signed in as Graduate School Staff (staff@usls.edu.ph)	Back to the office side. Graduate School staff signs in again.
1:32	Staff opens Maya's submitted return case	On the staff board, the card has moved to Return review on its own.
1:38	Staff opens Maya's submitted return case	Opening it, the request shows the intention and the residence limits.
1:47	Staff drags the card to With the Dean and forwards	Graduate School staff forwards it to the Dean, with a note.

1:55	Signed in as Dean (dean@usls.edu.ph)	Now it's the Dean's turn. The Dean signs in.
2:06	Dean drags the card to Back in the program and approves	The Dean drags the card to Back in the program. The approval restores the student's standing.
2:14	Dean drags the card to Back in the program and approves	And Maya is active again.
2:17	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in one last time.
2:23	Staff sees the outcome and the Registrar list	Next, the Academic Coordinator is the owner, because enrolling subjects is a separate step.
2:32	Staff sees the outcome and the Registrar list	And here we have the Registrar list. It has one report for each approved return. Staff download it and send it officially.
2:41	Signed in as Student (awol.maya@usls.edu.ph)	Finally, Maya signs in again.
2:46	Student sees the outcome	Maya can see the approval. So leave, readmission, and AWOL returns all use the same board, the same request window, and the same Registrar list.

2l Reports Analytics (2:15)

Video: 2l-Reports-Analytics.mp4

Time	On screen	Say
0:01	Signed in as Graduate School Staff (staff@usls.edu.ph)	Next, we have Reports and Analytics. Graduate School staff signs in.
0:08	Open Reports & Analytics	Here we have Reports and Analytics, under Overview. At the top are the filters: program, year started, and period. Below them are the six numbers the office asks about most.
0:19	Read the six numbers	First, Behind schedule. It's the share of active students who are running late, compared to a target.
0:26	Read the six numbers	Then Median days to decide, compared to the twelve months before. Every number here comes from recorded events.
0:33	Needs attention: the causes, the students behind a bar, the list	Next, we have Needs attention. It shows one bar per cause. The longest bar affects the most students.
0:41	Needs attention: the causes, the students behind a bar, the list	Clicking a cause narrows the list to just the students it affects.
0:47	Needs attention: the causes, the students behind a bar, the list	Show all causes brings the full list back, most delayed first, with the office that can move each student forward. It downloads as Excel or PDF.
0:58	Where students get stuck	Next, we have Where students get stuck. It counts the students at each stage, as on time, slow, or stuck.
1:07	Where students get stuck	Every count is a button. Click it to see the actual students behind the number.
1:14	Office speed	Then Office speed. It shows which offices take longest to close requests. The longest red bar is the office to ask first.
1:24	Records to fix	Next, we have Records to fix. It lists research students with missing details, such as no adviser. Once a record is fixed, it drops off the list.
1:35	Report: By year started	This next tab shows students by year started and by stage.
1:41	Report: Graduation candidates	Then Graduation candidates. It shows who can graduate, and what is still missing.
1:47	Report: Overdue and pending	Overdue and pending lists every waiting task, longest first.
1:52	Report: Defenses	Defenses shows the ones already held and the ones coming up, with the panel and the verdict.
1:59	Registrar changes	And Registrar changes is the daily list the Registrar needs to apply in AIMS.
2:07	Filter by program: every number follows	One last thing. Every filter applies to the whole page. Pick one program, and all the numbers follow.

2m Best Features (2:28)

Video: 2m-Best-Features.mp4

Time	On screen	Say
0:01	Signed in as Graduate School Staff (staff@usls.edu.ph)	Finally, let's go through the five best features of the portal. Graduate School staff signs in.
0:08	1 Business Rules: every rule with its page and a label	First, we have rules with a source. Every rule the workflows follow is kept in one register. Each rule shows its page in the Handbook or the Research Protocol, and a label: enforced by the system, documented only, or needs review.
0:25	1 Business Rules: every rule with its page and a label	Search for a topic, and the matching rules come up, each with its page.
0:35	2 Policy Assistant: question, cited answer, the exact passage	Second, we have the Policy Assistant. It answers only from the Graduate School's own documents. Ask a question, and the answer names its source.
0:45	2 Policy Assistant: question, cited answer, the exact passage	This site runs without the Gemini key, so this is the offline answer. Clicking the source opens the exact passage.
0:58	3 Panel Matching: ranked candidates and how the score was built	Third, we have panel matching that explains itself. Each faculty member gets a score out of one hundred.
1:06	3 Panel Matching: ranked candidates and how the score was built	The breakdown is right on screen: expertise, availability, and workload, with the passage that matched. A person still makes the final choice.
1:20	4 Defense Scheduling: best shared options, hard stop versus warning	Fourth, we have scheduling that checks before it books. It reads everyone's availability and suggests the best shared times.
1:32	4 Defense Scheduling: best shared options, hard stop versus warning	Hard stops, like a panelist or a room booked twice, can't be overridden. Warnings, like a short lead time, need a reason on record.
1:44	5 a staged board: stages as columns, requests as cards	Fifth, we have shared boards. Leave, readmission, AWOL, withdrawal, practicum, and graduation all run on the same kind of board, and every move is recorded.
1:57	5 Reports and Analytics computed from the records	And Reports and Analytics are built from those records. Nothing is typed in by hand.
2:03	5 Reports and Analytics computed from the records	To sum up, each feature takes data the Graduate School already has, adds the policy behind it, and turns it into a decision, a warning, or a number to track.
2:16	5 Reports and Analytics computed from the records	To be honest about the limits: the portal doesn't send e-mail, Google Calendar is optional, official data comes only from AIMS, and rules marked Needs review still wait for validation. Thank you.
