Demo Narration Script — Migui's parts

Read each line while its screen shows. The time is where the line starts in the video (minutes:seconds). The video holds still on each screen long enough for its line at a calm pace; if you need longer, pause or slow that clip in your editor. Each video also has a matching .srt file with the same lines, usable as a teleprompter track.

2d Monitoring Sheet (4:28)

Video: 2d-Monitoring-Sheet.mp4

Time	On screen	Say
0:00	Title card	Next is the Monitoring Sheet, the curriculum grid the Graduate School used to keep in Excel: one row per student, one column per subject. In the portal, Graduate School staff keep it current on the screen, and every entry records its source.
0:23	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in.
0:34	Open Monitoring Sheet, choose MSN	This is the Monitoring Sheet, under Records. Graduate School staff picks the Master of Science in Nursing program. Each row is a student, each column a subject. The colour shows completed, enrolled, or not yet taken, and the legend explains every mark. Staff can still upload a workbook under Student Handoff instead.
1:02	Open Add student	Adding a student missing from the imported sheet. The window says up front: this is a manual entry, recorded with the staff member's name and time.
1:21	Fill and submit the new student	Graduate School staff types the student ID, name, and school year of entry. The import's required fields and duplicate checks apply here too, so manual entries are no sloppier than imports.
1:39	Fill and submit the new student	The student is added, with a Student Portal login, exactly like an import. Graduate School staff adds the subjects next.
1:52	Add subjects now: the record panel	This is the student's record panel: all eighteen subjects of the curriculum, none taken yet, with the units counted automatically.
2:08	Add subject row MSN-FED	Graduate School staff adds a subject: status Completed, the term, and a remark, here 'credited from a transfer record'.
2:25	Two manual rows with provenance	After the second subject: two of eighteen completed, six units. In the Source column both rows say Manual entry, so nobody mistakes manual data for imported data.
2:45	Edit the remarks of MSN-FED	To correct a remark, Graduate School staff edits the row. A portal entry needs only a simple edit.
3:00	Remove the MSN-MOR row with a reason	Removing a row needs a reason. The row is not erased: it returns to not taken and stays in the history.
3:15	Remove the MSN-MOR row with a reason	One completed subject remains. The counts update.
3:22	Change history tab	This is the Change history tab. Every add, change and removal appears with old value, new value, who made it, when, source, and reason. That is the audit trail.
3:42	New student appears in the grid, marked Manual	Back on the grid, the new student carries a Manual tag. The hand-entered cell has a small orange dot, so manual data shows at a glance.
3:57	Imported student: provenance and reason required to change an imported value	Now an imported student, Katrina Cabrera. Every row says Imported: official workbook values.
4:06	Imported student: provenance and reason required to change an imported value	Changing an imported value requires a reason before the system saves it, and the history records the reason with the staff member's name. Official values are never overwritten silently. Grades are never entered here: AIMS is the official source.

2h 1 Leave of Absence (6:32)

Video: 2h-1-Leave-of-Absence.mp4

Time	On screen	Say
0:00	Title card	Now Leave of Absence, Readmission and AWOL. All three run on the same kind of board, so seeing one means seeing all three. First, a student asks for a leave.
0:17	Signed in as Student (loa.daniel@usls.edu.ph)	Daniel Fernandez, a Master of Arts in Education student, signs in. The student accepted a work assignment in another city.
0:34	Student opens Leave of Absence	Under Requests, the student opens Leave of Absence. The form shows the limits: two semesters at a time, renewable once, four semesters in total at most.
0:50	Student reads the rules panel	'Rules applied on this screen' lists the same rules Graduate School staff applies, each with its Handbook page. Needs review marks prototype values the Graduate School must still confirm.
1:19	Student fills the form	The student picks the start and end dates. The system says two semesters. The student adds a reason and short explanation.
1:30	Student sends the request	Before sending, the student checks a summary: from, to, and the reason.
1:40	Student sends the request	Submitted. The request now waits for Graduate School staff review.
1:53	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in.
2:05	Staff opens the Leave of Absence board and finds Daniel	Leave of Absence board: columns are stages, cards are requests. Graduate School staff finds Daniel's card in Submitted, flagged 'awaiting your review'.
2:22	Staff drags the card to In staff review	Graduate School staff drags the card to In staff review. Dragging equals the buttons, and the server checks every move, so no card moves where the rules forbid.
2:40	Staff switches to Table and back to Board	Graduate School staff can read the same requests as a table.
2:50	Staff opens the request and reads the policy check	Graduate School staff opens the request: leave period, reason, and the student's explanation.
2:58	Staff opens the request and reads the policy check	The policy check below advises staff. Each rule shows Pass or Needs review; minimum residency shows Needs review, a prototype rule. The check never decides. The Dean does.
3:24	Staff forwards to the Dean	Graduate School staff forwards it to the Dean, noting the checks.
3:33	Staff forwards to the Dean	The card moves to With the Dean, locked for staff. The board shows 'Waiting for: Dean', not a hidden card.
3:45	Signed in as Dean (dean@usls.edu.ph)	The Dean signs in.
3:58	Dean drags the card to Leave scheduled and approves	The Dean sees the same board, with requests awaiting decision.
4:13	Dean drags the card to Leave scheduled and approves	The Dean drags the card to Leave scheduled. The approval window opens for a note the student will read.
4:27	Dean drags the card to Leave scheduled and approves	Approved. The card sits in Leave scheduled, flagged for the Registrar. The Dean could instead return it for revision or deny it, with a comment.
4:41	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in.
4:55	Staff sees the approved request in Leave scheduled	Graduate School staff sees the card in Leave scheduled. Normally the leave starts by itself on day one.
5:07	Staff drags the card to On leave and starts the leave	For the demo, Graduate School staff drags the card to On leave now.
5:17	Staff drags the card to On leave and starts the leave	Daniel is now on leave, and enrollment is closed for the student.
5:25	Staff sees the Registrar list	Below is the Registrar list. The portal sends no e-mail. Graduate School staff downloads it, sends it through the official channel, marks it sent, then acknowledged.
5:40	Staff downloads the Registrar list (CSV)	Graduate School staff downloads the list; the system notes no e-mail was sent.

5:51	Staff marks the list as sent	Graduate School staff ticks Daniel and marks the list sent to the Registrar, so the office knows what was handed over.
6:04	Signed in as Student (loa.daniel@usls.edu.ph)	Finally, Daniel signs back in to see the decision.
6:22	Student sees the leave	On the student side, Daniel sees the status On leave and every message along the way.

2h 2 Readmission (4:26)

Video: 2h-2-Readmission.mp4

Time	On screen	Say
0:00	Title card	That was leaving properly. Readmission is the return from an approved leave.
0:09	Signed in as Student (readmission.therese@usls.edu.ph)	Therese Lacson, a student already on approved leave, signs in.
0:22	Student opens Readmission	The Readmission page says Therese is on leave and enrollment stays closed until readmission is approved. The leave being ended is pre-filled.
0:36	Student reads the rules panel	The rule: a returning student writes an intent to enroll, Handbook page fifty-three.
0:54	Student fills the request and ticks the four items	Therese picks the return semester, gives a reason for returning, and confirms the four checklist items.
1:03	Student sends the request	Again, a summary to check first.
1:10	Student sends the request	Submitted. The request goes to Graduate School staff, then to the Dean.
1:19	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in.
1:29	Staff opens the Readmission board and finds Therese	The Readmission board: same layout, own columns. Therese's card is in Submitted.
1:40	Staff drags the card to In staff review	Graduate School staff drags it to review.
1:46	Staff opens the request, reads the checklist and the policy check	The request shows the return semester, the intention, and the linked leave.
1:53	Staff opens the request, reads the checklist and the policy check	The checklist shows what the student ticked, not yet verified. Below, the history: one year in the program, two of four leave semesters already approved.
2:07	Staff opens the request, reads the checklist and the policy check	The policy check flags an early return, before the leave ends. Only the Dean can allow that, so it shows Needs review.
2:27	Staff verifies the checklist and forwards to the Dean	Forwarding, Graduate School staff ticks the items verified. Anything unticked reaches the Dean as Needs review.
2:40	Staff verifies the checklist and forwards to the Dean	Forwarded, locked, waiting for the Dean.
2:45	Signed in as Dean (dean@usls.edu.ph)	The Dean signs in to decide.
2:57	Dean drags the card to Approved and approves	The Dean finds Therese's request in With the Dean.
3:09	Dean drags the card to Approved and approves	The Dean approves it, back in the program, with a note.
3:19	Dean drags the card to Approved and approves	Therese is active again. Readmission restores standing but does not enroll the student in subjects. The Academic Coordinator does that next.
3:31	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in.
3:44	Staff sees the approved request and the Registrar list	The staff board now shows the Academic Coordinator as next owner, flagged for the Registrar.
3:55	Staff sees the approved request and the Registrar list	Same Registrar list: Graduate School staff downloads, sends, marks sent, then acknowledged.
4:03	Signed in as Student (readmission.therese@usls.edu.ph)	Finally, Therese signs back in.

4:18	Student sees the result	Therese sees the approval, with messages from staff and the Dean.

2h 3 AWOL and Return from AWOL (5:06)

Video: 2h-3-AWOL-and-Return-from-AWOL.mp4

Time	On screen	Say
0:00	Title card	Last is the improper way out: a student who stopped enrolling without an approved leave. Nobody types 'AWOL'; the system flags it from the imported enrollment records.
0:16	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in.
0:25	Staff opens AWOL & Residency and finds Maya (flagged by the system)	The AWOL and Residency board flags cases from the source records. The line above counts the cases in each column.
0:38	Staff opens AWOL & Residency and finds Maya (flagged by the system)	Graduate School staff finds Maya Torres's card in AWOL, with the flag's start date and 'Waiting for: Student'. Staff cannot move it; only the student can start a return.
0:54	Staff reads the rules panel	Residence limits apply: for a master's student, five years normal and seven absolute; for a doctorate, seven and nine. Time on leave counts toward residence. Each rule shows its Handbook page.
1:19	Staff opens Maya's AWOL card	The card shows the AWOL date, the flag's source, and the last enrolled semester. Graduate School staff has no button yet.
1:32	Signed in as Student (awol.maya@usls.edu.ph)	The student, Maya, signs in.
1:42	Student opens Return from AWOL	The Return from AWOL page shows the flag, and says registration stays restricted until review.
2:01	Student fills and sends the return declaration	Maya picks the return semester and last enrolled semester, then writes the intention and reason.
2:10	Student fills and sends the return declaration	Maya checks the summary and sends.
2:17	Student fills and sends the return declaration	Submitted. The system finds Maya within the maximum residence. The student cannot cancel it, only contact the Graduate School office.
2:29	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in.
2:42	Staff opens Maya's submitted return case	On the staff board, the card has moved itself to Return review.
2:50	Staff opens Maya's submitted return case	The request shows the intention and the residence limits.
3:08	Staff drags the card to With the Dean and forwards	Graduate School staff forwards it to the Dean with a note.
3:16	Staff drags the card to With the Dean and forwards	Forwarded and locked.
3:20	Signed in as Dean (dean@usls.edu.ph)	The Dean signs in to decide.
3:32	Dean drags the card to Back in the program and approves	The Dean finds Maya's card in that column.
3:45	Dean drags the card to Back in the program and approves	The Dean drags it to Back in the program; approval restores standing.
3:56	Dean drags the card to Back in the program and approves	The card lands in Back in the program: Maya is active.
4:03	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in.
4:15	Staff sees the outcome and the Registrar list	Staff board: the Academic Coordinator is next owner, since enrollment is a separate step.
4:26	Staff sees the outcome and the Registrar list	All four tracker steps are complete.
4:31	Staff sees the outcome and the Registrar list	The Registrar list here has one report per approved return. Graduate School staff downloads it and sends it officially.
4:43	Signed in as Student (awol.maya@usls.edu.ph)	The student, Maya, signs in.

4:55	Student sees the outcome	Maya sees the approval. Leave, return and AWOL all ran on the same board, request window and Registrar list.

2l Reports Analytics (4:21)

Video: 2l-Reports-Analytics.mp4

Time	On screen	Say
0:00	Title card	Every case so far followed one student. Reports and Analytics ask what the Graduate School knows about all students at once. Every number is computed from the records, not typed in.
0:18	Signed in as Graduate School Staff (staff@usls.edu.ph)	Graduate School staff signs in.
0:30	Open Reports & Analytics	Reports and Analytics is under Overview. Three filters sit on top: program, entry cohort, and period, by default the last twelve months. Below, six numbers answer the questions the office asks most.
0:50	Read the six numbers	Take Behind schedule: the share of active students who are behind, against a target. It shows at once whether the Graduate School is on track.
1:04	Read the six numbers	Median days to decide shows how fast requests are decided, against the twelve months before. Every number comes from recorded events and updates as work happens.
1:18	Needs attention: the causes, the students behind a bar, the list	The first tab, Needs attention, asks what holds students back. Each bar is a cause; the longest affects the most students.
1:31	Needs attention: the causes, the students behind a bar, the list	Selecting a cause narrows the list below to the students affected, so no bar is just a number.
1:43	Needs attention: the causes, the students behind a bar, the list	Show all causes restores the full list, most delayed first: stage, main reason, days in stage, and the office that can move the student on. Download it as Excel or PDF with the same filters.
2:03	Where students get stuck	Where students get stuck counts students per lifecycle stage as on time, slow, or stuck, with the limits underneath.
2:16	Where students get stuck	Every count here is a button. Selecting one opens the real students behind it, each linked to its record, so no figure is taken on trust.
2:33	Office speed	Office speed shows which offices take longest to close requests, grouped by days waiting. The longest red bar marks the office to ask first.
2:48	Records to fix	Records to fix lists research students with missing records, such as no adviser on file. A fixed record drops off the list.
3:02	Report: Cohorts by stage	The detailed lists remain. Cohorts by stage counts students of each program and entry year at each stage.
3:15	Report: Graduation candidates	Graduation candidates shows who can graduate, what is missing, and each student's place in a graduation batch.
3:26	Report: Overdue and pending	Overdue and pending lists each waiting task and request, longest first, and the office that must act.
3:37	Report: Defenses	Defenses lists held and upcoming defenses, with panel and verdict.
3:45	Registrar changes	Registrar changes is the daily list of changes made here that the Registrar must apply in AIMS, each marked when sent.
4:01	Filter by program: every number follows	Every filter covers the whole page. Graduate School staff picks one program, and the six numbers and charts follow. So the Graduate School monitors many students at once, not record by record.

2m Best Features (closing, no video — say it over the closing slide, about 2 minutes)

1. Rules with a source. Every rule the workflows follow sits in one register, with its Handbook or Protocol page and a label: enforced, only documented, or needs review. Each rule also appears on the screen where it applies, and a refusal quotes the rule.

2. A policy library and an assistant that cites its source. The Policy Assistant answers only from the Graduate School's own documents, names the document and page, and says when the documents do not cover a question.
3. Panel matching that explains itself. Each faculty member gets a score out of one hundred, from the paper's similarity to the faculty member's expertise, availability and workload, with the breakdown on screen. A person still chooses the panel.
4. Scheduling that checks before booking. It reads availability, suggests the best shared times, and separates hard stops, such as a double-booked panelist, from overridable warnings that need a recorded reason.
5. Shared boards and reports computed from records. Leave, readmission, AWOL, withdrawal, practicum and graduation run on the same staged boards, every move is recorded, and Reports and Analytics are computed from those records.
6. What connects all five: each takes data the Graduate School already has, plus the governing policy, and turns it into a decision, a warning or a measurement, not just a stored record.
7. Now the honest limits: the portal sends no e-mail, Google Calendar is optional, official student, enrollment and grade data come only from AIMS, and rules marked Needs review wait for the Graduate School's validation. Thank you.
