Demo Narration Script — Migui's parts

Read each line while its screen shows. The time is where the line starts in the video (minutes:seconds). The video holds still on each screen long enough for its line at a calm pace; if you need longer, pause or slow that clip in your editor. Each video also has a matching .srt file with the same lines, usable as a teleprompter track.

2d Monitoring Sheet (4:28)

Video: 2d-Monitoring-Sheet.mp4

Time	On screen	Say
0:00	Title card	Next is the Monitoring Sheet. This is the curriculum grid the Graduate School used to keep in Excel: one row per student, one column per subject. In the portal, staff keep this record up to date on the screen itself, and every entry remembers where it came from.
0:23	Signed in as Graduate School Staff (staff@usls.edu.ph)	I sign in as Graduate School staff.
0:34	Open Monitoring Sheet, choose MSN	This is the Monitoring Sheet, under Records. I pick the Master of Science in Nursing program. Each row is a student and each column is a subject in the curriculum; the colour shows whether the subject is completed, enrolled, or not yet taken. The legend explains every mark, and staff can still upload a workbook under Student Handoff if they prefer.
1:02	Open Add student	Let's add a student who is not in the imported sheet yet. The window says up front that this is recorded as a manual entry, with my name and the time.
1:21	Fill and submit the new student	I type the student ID, the first and last name, and the school year of entry. The same required fields and duplicate checks as the workbook import apply here, so a manual entry cannot be sloppier than an import.
1:39	Fill and submit the new student	The student is added, and a Student Portal login is created for them, exactly like the import would do. Now I add their subjects right away.
1:52	Add subjects now: the record panel	This is the student's record panel. It lists all eighteen subjects of the curriculum, all not taken yet, with the units counted for us.
2:08	Add subject row MSN-FED	I add a subject row: status Completed, the term it was taken, and a remark, here 'credited from a transfer record'.
2:25	Two manual rows with provenance	After the second subject, the panel shows two of eighteen completed and six units. Notice the Source column: both rows are marked Manual entry, so nobody will mistake them for imported data.
2:45	Edit the remarks of MSN-FED	If a remark needs correcting, I edit the row. Because this row was entered in the portal, a simple edit is enough.
3:00	Remove the MSN-MOR row with a reason	Removing a row is different: the system asks for a reason, and it explains that the row is not erased. It goes back to not taken and stays in the history.
3:15	Remove the MSN-MOR row with a reason	One completed subject remains, and the counts update immediately.
3:22	Change history tab	This is the Change history tab. Every add, change and removal is listed with the old value, the new value, who did it, when, the source, and the reason. This is the audit trail the Graduate School can rely on.
3:42	New student appears in the grid, marked Manual	Back on the grid, the new student carries a Manual tag, and the cell entered by hand has a small orange dot, so manual data is visible at a glance.
3:57	Imported student: provenance and reason required to change an imported value	Now an imported student, Katrina Cabrera. Here every row says Imported: these values came from the official workbook.
4:06	Imported student: provenance and reason required to change an imported value	If I try to change an imported value, the system requires a reason before it will save, and that reason goes into the history with my name. Official values are never overwritten silently. And grades are never entered here: AIMS stays the official source for grades.

2h 1 Leave of Absence (6:32)

Video: 2h-1-Leave-of-Absence.mp4

Time	On screen	Say
0:00	Title card	Now Leave of Absence, Readmission and AWOL. These three run on the same kind of board, so once you have seen one, you know all of them. First, a student asks for a leave.
0:17	Signed in as Student (loa.daniel@usls.edu.ph)	I sign in as Daniel Fernandez, a Master of Arts in Education student who has accepted a work assignment in another city.
0:34	Student opens Leave of Absence	Under Requests, he opens Leave of Absence. The form tells him the limits straight away: up to two semesters at a time, renewable once, and never more than four semesters in total.
0:50	Student reads the rules panel	He can open 'Rules applied on this screen'. These are the same rules the staff will apply, each with its Handbook page. The ones marked Needs review are prototype values the Graduate School still has to confirm.
1:19	Student fills the form	He chooses when the leave starts and ends, the system tells him that is two semesters, and he gives the reason and a short explanation.
1:30	Student sends the request	Before anything is sent, he sees a summary to check: from, to, and the reason.
1:40	Student sends the request	It is submitted. He can see the tracker: staff review, Dean decision, the leave begins, and his return. He always knows who has his request right now.
1:53	Signed in as Graduate School Staff (staff@usls.edu.ph)	Now the Graduate School staff side.
2:05	Staff opens the Leave of Absence board and finds Daniel	This is the Leave of Absence board. Each column is a stage, and each card is a request. I search for Daniel: his card is in Submitted, flagged 'awaiting your review'.
2:22	Staff drags the card to In staff review	I drag the card to In staff review. Dragging does exactly the same as the buttons, and the server still checks every move, so a card cannot be dragged somewhere the rules do not allow.
2:40	Staff switches to Table and back to Board	The same requests can be read as a table, if staff prefer a list.
2:50	Staff opens the request and reads the policy check	I open the request. It shows the leave period, the reason, and what the student wrote.
2:58	Staff opens the request and reads the policy check	Below that is the policy check, advice for staff. Each rule shows Pass or Needs review. Minimum residency says Needs review because it is a prototype rule. The check never decides: the Dean does.
3:24	Staff forwards to the Dean	I forward it to the Dean with a note explaining what I checked.
3:33	Staff forwards to the Dean	The card moves to With the Dean and is locked for staff. The board says 'Waiting for: Dean' instead of hiding the card.
3:45	Signed in as Dean (dean@usls.edu.ph)	Now I sign in as the Dean.
3:58	Dean drags the card to Leave scheduled and approves	The Dean sees the same board, with the requests waiting for a decision.
4:13	Dean drags the card to Leave scheduled and approves	The Dean drags the card to Leave scheduled. The approval window opens, and the Dean can add a note the student will read.
4:27	Dean drags the card to Leave scheduled and approves	Approved. The card is in Leave scheduled and is flagged for the Registrar. The Dean could also have returned it for revision or denied it, both with a comment.
4:41	Signed in as Graduate School Staff (staff@usls.edu.ph)	Now the Graduate School staff side.
4:55	Staff sees the approved request in Leave scheduled	Back as staff, the card waits in Leave scheduled. Normally the leave starts by itself on its first day.
5:07	Staff drags the card to On leave and starts the leave	For the demonstration, I start the leave now by dragging the card to On leave.
5:17	Staff drags the card to On leave and starts the leave	Daniel is now on leave, and enrollment is closed for him while he is away.
5:25	Staff sees the Registrar list	Further down is the Registrar list. The portal sends no e-mail: staff

		download the list, send it through the official channel, then mark it sent and later acknowledged.
5:40	Staff downloads the Registrar list (CSV)	I download the list. The system reminds me that no e-mail was sent by the portal.
5:51	Staff marks the list as sent	I tick Daniel and mark the list as sent to the Registrar, so the office always knows what was handed over and what was not.
6:04	Signed in as Student (loa.daniel@usls.edu.ph)	I sign in as Daniel Fernandez, a Master of Arts in Education student who has accepted a work assignment in another city.
6:22	Student sees the leave	And on the student's side, Daniel sees that he is on leave, with every message he received along the way.

2h 2 Readmission (4:26)

Video: 2h-2-Readmission.mp4

Time	On screen	Say
0:00	Title card	That was leaving properly. Readmission is the other end: coming back from an approved leave.
0:09	Signed in as Student (readmission.therese@usls.edu.ph)	I sign in as Therese Lacson, who is already on an approved leave.
0:22	Student opens Readmission	Her Readmission page says she is on leave and that enrollment stays closed until a readmission is approved. The leave she is ending is filled in for her.
0:36	Student reads the rules panel	The rule behind this page: a returning student writes an intent to enroll, from the Handbook, page fifty-three.
0:54	Student fills the request and ticks the four items	She picks the semester she wants to return in, explains why she is ready, and confirms the four checklist items.
1:03	Student sends the request	Again, a summary to check before sending.
1:10	Student sends the request	Submitted, with a four-step tracker: staff review, Dean decision, and back in the program.
1:19	Signed in as Graduate School Staff (staff@usls.edu.ph)	Staff side again.
1:29	Staff opens the Readmission board and finds Therese	The Readmission board: the same board, with its own columns. Therese's card is in Submitted.
1:40	Staff drags the card to In staff review	I drag it to In staff review.
1:46	Staff opens the request, reads the checklist and the policy check	The request shows the return semester, her intention, and the linked leave of absence.
1:53	Staff opens the request, reads the checklist and the policy check	The return checklist shows what the student ticked, not yet verified by staff. Below, her history: one year in the program and two of four leave semesters already used.
2:07	Staff opens the request, reads the checklist and the policy check	The policy check flags one thing: she wants to return before her leave ends. That is allowed only if the Dean agrees, so it says Needs review.
2:27	Staff verifies the checklist and forwards to the Dean	When I forward, I tick the checklist items I verified myself. Anything I leave unticked reaches the Dean as Needs review.
2:40	Staff verifies the checklist and forwards to the Dean	Forwarded, and locked: waiting for the Dean.
2:45	Signed in as Dean (dean@usls.edu.ph)	The Dean decides.
2:57	Dean drags the card to Approved and approves	The Dean finds Therese's request in With the Dean.
3:09	Dean drags the card to Approved and approves	The Dean drags it to Approved, back in the program, with a note.
3:19	Dean drags the card to Approved and approves	She is active again. Note that readmission restores her standing; it does not enroll her in subjects. That is the Academic Coordinator's next step.
3:31	Signed in as Graduate School Staff (staff@usls.edu.ph)	Staff side again.

3:44	Staff sees the approved request and the Registrar list	On the staff board, the card now says the next owner is the Academic Coordinator, and it is flagged for the Registrar.
3:55	Staff sees the approved request and the Registrar list	The Registrar list works exactly as before: download, send it yourself, mark sent, mark acknowledged.
4:03	Signed in as Student (readmission.therese@usls.edu.ph)	I sign in as Therese Lacson, who is already on an approved leave.
4:18	Student sees the result	And Therese sees her readmission approved, with the messages from staff and the Dean.

2h 3 AWOL and Return from AWOL (5:06)

Video: 2h-3-AWOL-and-Return-from-AWOL.mp4

Time	On screen	Say
0:00	Title card	The last one is the improper way out: a student who stopped enrolling without an approved leave. Nobody types 'AWOL' by hand. The system flags the student from the official records.
0:16	Signed in as Graduate School Staff (staff@usls.edu.ph)	I sign in as staff.
0:25	Staff opens AWOL & Residency and finds Maya (flagged by the system)	This is the AWOL and Residency board. It flags cases from the source records, and the line above counts the cases in each column.
0:38	Staff opens AWOL & Residency and finds Maya (flagged by the system)	I search for Maya Torres. Her card is in the AWOL column, with the date the flag started, and it says 'Waiting for: Student'. Staff cannot move it: only the student can start a return.
0:54	Staff reads the rules panel	The rules here are the residence limits: five years normal and seven absolute for a master's student, seven and nine for a doctorate, and time on leave counts toward residence. Each rule shows its Handbook page.
1:19	Staff opens Maya's AWOL card	Opening the card shows the AWOL date, where the flag came from, and the last enrolled semester. There is no button for staff yet.
1:32	Signed in as Student (awol.maya@usls.edu.ph)	Now I sign in as Maya.
1:42	Student opens Return from AWOL	Her Return from AWOL page shows the flag, and a note that registration stays restricted until her return is reviewed.
2:01	Student fills and sends the return declaration	She chooses her intended return semester and her last enrolled semester, and writes her intention and her reason for returning.
2:10	Student fills and sends the return declaration	She checks the summary and sends it.
2:17	Student fills and sends the return declaration	Submitted. The system classifies her as within the maximum residence, and she cannot cancel it herself; she has to contact the Graduate School office.
2:29	Signed in as Graduate School Staff (staff@usls.edu.ph)	I sign in as staff.
2:42	Staff opens Maya's submitted return case	Back on the staff board, the card has moved by itself to Return review.
2:50	Staff opens Maya's submitted return case	The request shows her written intention, the residence limits, and the policy check: eligible for Dean review.
3:08	Staff drags the card to With the Dean and forwards	I drag it to With the Dean and add a note.
3:16	Staff drags the card to With the Dean and forwards	Forwarded, and locked for staff.
3:20	Signed in as Dean (dean@usls.edu.ph)	The Dean decides.
3:32	Dean drags the card to Back in the program and approves	The Dean finds Maya's card in With the Dean.
3:45	Dean drags the card to Back in the program and approves	The Dean drags it to Back in the program. The window explains that approval restores her standing.
3:56	Dean drags the card to Back in the program and approves	The card lands in Back in the program: she is active again.

4:03	Signed in as Graduate School Staff (staff@usls.edu.ph)	I sign in as staff.
4:15	Staff sees the outcome and the Registrar list	On the staff side, the next owner is the Academic Coordinator, because enrollment is a separate step.
4:26	Staff sees the outcome and the Registrar list	All four steps of the tracker are complete.
4:31	Staff sees the outcome and the Registrar list	The Registrar list here is a list of reports, one per approved return. Staff download it and send it through the official channel.
4:43	Signed in as Student (awol.maya@usls.edu.ph)	Now I sign in as Maya.
4:55	Student sees the outcome	And Maya sees her return approved. So leave, return and AWOL all ran on the same board, the same request window and the same Registrar list.

2l Reports Analytics (4:21)

Video: 2l-Reports-Analytics.mp4

Time	On screen	Say
0:00	Title card	Every case so far followed one student. Reports and Analytics answer the other question: what does the Graduate School know about all of its students at once? Every number here is computed from the records, not typed in.
0:18	Signed in as Graduate School Staff (staff@usls.edu.ph)	I sign in as Graduate School staff.
0:30	Open Reports & Analytics	Reports and Analytics is under Overview. At the top are three filters: program, entry cohort, and the period, which by default is the last twelve months. Below them is a strip of six numbers that answer the questions the office asks most often.
0:50	Read the six numbers	For example, Behind schedule: the share of active students who are behind, compared with a target, so you can see at once whether the Graduate School is on track.
1:04	Read the six numbers	Median days to decide shows how quickly requests are decided, compared with the twelve months before. Every number comes from recorded events, so it changes as the work is done.
1:18	Needs attention: the causes, the students behind a bar, the list	The first tab, Needs attention, asks: what is holding students back? Each bar is a cause, and the longest bar affects the most students.
1:31	Needs attention: the causes, the students behind a bar, the list	Selecting a cause narrows the list below to the students it affects, so the bar is never just a number.
1:43	Needs attention: the causes, the students behind a bar, the list	Show all causes brings back the full list: most delayed first, with the stage, the main reason, the days in that stage, and the office that can move the student on. It downloads as Excel or PDF with the same filters.
2:03	Where students get stuck	Where students get stuck shows, for each lifecycle stage, how many students are on time, slow, or stuck, with the limits written underneath.
2:16	Where students get stuck	Every count on these screens is a button. Selecting one opens the real students behind it, with a link to each record, so nobody has to take a figure on trust.
2:33	Office speed	Office speed shows which offices take longest to close requests, grouped by how many days they have been waiting. The longest red bar is the office to ask first.
2:48	Records to fix	Records to fix lists research students with missing records, for example no adviser on file. Once the record is fixed, the student leaves the list.
3:02	Report: Cohorts by stage	The detailed lists are still here. Cohorts by stage shows how many students of each program and entry year are at each stage.
3:15	Report: Graduation candidates	Graduation candidates shows who can graduate, what is still missing, and where each student stands in a graduation batch.
3:26	Report: Overdue and pending	Overdue and pending lists every task and request still waiting, longest wait first, with the office that must act.

3:37	Report: Defenses	Defenses lists the defenses held and upcoming, with the panel and the verdict.
3:45	Registrar changes	Registrar changes is the daily list of changes made here that the Registrar must apply in AIMS, each one marked when it is sent.
4:01	Filter by program: every number follows	And every filter applies to everything on the page. Here I choose one program, and all six numbers and the charts follow. This is how the Graduate School can monitor many students at once, instead of checking records one by one.

2m Best Features (closing, no video — say it over the closing slide, about 2 minutes)

1. Rules with a source. Every rule the workflows follow sits in one register, with the Handbook or Protocol page it comes from, and a label saying whether the system enforces it, only documents it, or still needs review. The same rules appear on the screen where they apply, and a refusal quotes the rule.
2. A policy library and an assistant that cites its source. The Policy Assistant answers only from the Graduate School's own documents, names the document and the page it used, and says so when the documents do not cover a question.
3. Panel matching that explains itself. Each faculty member gets a score out of one hundred, from the similarity between the paper and their expertise, their availability and their workload, and the breakdown is on the screen. A person still chooses the panel.
4. Scheduling that checks before it books. It reads availability, suggests the best shared times, and separates hard stops, like a double-booked panelist, from warnings that can be overridden with a recorded reason.
5. Shared boards and reports computed from records. Leave, readmission, AWOL, withdrawal, practicum and graduation all run on the same staged boards, every move is recorded, and Reports and Analytics are computed from those records.
6. What connects all five: each one takes data the Graduate School already has, together with the policy that governs it, and turns it into a decision, a warning or a measurement, instead of only storing a record.
7. And our honest limits: the portal sends no e-mail, Google Calendar is optional, official student, enrollment and grade data come only from AIMS, and the rules marked Needs review wait for the Graduate School's validation. Thank you.
